

# DETERMINE YOUR PROPERTY'S LIGHTING ASSESSMENT SCORE

HERE'S HOW OUR PROCESS WORKS

## 1. ANALYZE:

*The first step involves analyzing your existing outdoor lighting system. One of our Certified Lighting Technicians will conduct this strategically important probe to determine if it is performing properly and efficiently and provide you with your Lighting Assessment Score.*

## 2. REPAIR & ADJUST:

*After the analysis, we will walk you through your LAS to discuss recommendations and repairs which are prioritized in order of importance, based on your goals and our experience of value-added enhancements.*

## 3. AUGMENT:

*Once the critical repairs and adjustments are made, our Certified Lighting Technician will continue exploring other opportunities to ensure optimum performance of your system. This includes bulb examination, fixture quality, transformer capacity, and lighting controls.*

## 4. RETROFIT:

*Just as you upgrade your cell phone and other electronic devices, it's important to upgrade inefficient bulbs that impact your bottom line by wasting electricity. Fortunately, Hospitality Outdoor Lighting provides and champions the latest in highly energy-efficient LED lighting technology.*

## 5. ANNUAL MAINTENANCE PLAN (AMP):

*Experience tells us that nature, landscape maintenance, and guest traffic will eventually take its toll on your system. With our recurring AMP, your outdoor lighting system will maintain its integrity and perform as beautifully as the day it was installed.*

Discover first-hand what's working, and what's not, with your outdoor landscape lighting system—and start saving.

Your guests should feel safe and secure when they arrive on your property at night. Let us assess your architectural and landscape lighting to ensure your guests are getting the best experience possible.

Whether you need a new outdoor lighting system, or already have one in place, our proprietary Lighting Assessment Score (LAS) will deep-dive into your exterior lighting system operation and make recommendations on how you can save dollars in precious energy use while enhancing guest experiences, site beautification, safety and security.

*We have pioneered a 5-step process that ensures peak performance of your property's outdoor lighting system.*

The eventual result? Your outdoor lighting system will no longer be an eye sore, a tripping hazard to guests, or a maintenance nightmare. Instead, you'll enjoy the rewards of an efficient landscape lighting system that is properly adjusted, designed and maintained.
